

# Map a Digital Implementation Strategy

Successfully navigate the implementation process for bringing new technology into the classroom, creating meaningful, purposeful learning experiences. Here's a framework for success.

## STEP #1

### **ENGAGE ALL STAKEHOLDERS.**

Invest time in engaging key stakeholders from the start. Remember, your teachers and students are the end users. Give them a role in the process to accelerate adoption and provide opportunities for testing and feedback.

### **CREATE A SHARED VISION FOR THE TRANSFORMATION.**

Lead with the problem your district is facing, not the solution. Doing so will educate stakeholders on where your district is in relation to where it wants to be. This will foster community and create opportunities for all groups to take an active role in decision making.

## STEP #2

## STEP #3

### **DEVELOP SHARED GOALS FOR THE TRANSFORMATION.**

Establish committees, organize town halls and leverage local media outlets to instill a culture of collaboration and transparency. This will produce valuable insights you wouldn't otherwise receive. It sets clear standards for success and defines why, what and how your district will achieve its goals.

### **PLAN FOR IMPLEMENTATION.**

Planning ahead and setting the stage in advance will give everyone time to adjust to the changes, establish benchmarks for success, develop a realistic timeline, empower students, gather feedback and apply the lessons learned.

## STEP #4

Existing tools can no longer keep up with the demands placed on administrators, educators and students. Follett MyDestiny is the future of integrated online learning in the classroom.
