

# When is it time for a new solution?

When your edtech platform barely scratches the surface of these key must-haves.

**A personalized learning solution should empower teachers.**

Does it feature automation tools to reduce your workload?

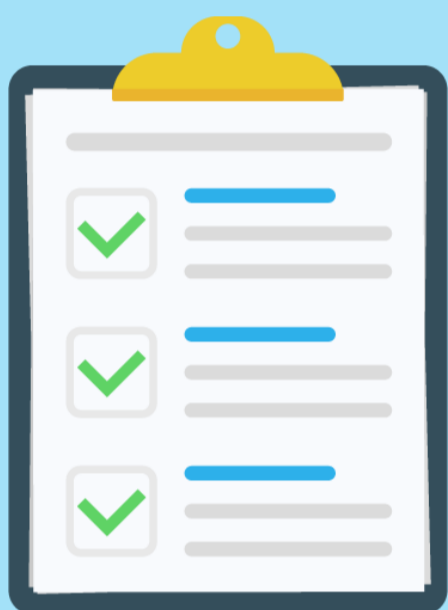

Does it boost college-readiness with a goal-oriented approach?

Does it include access to FREE resources, reducing textbook costs?

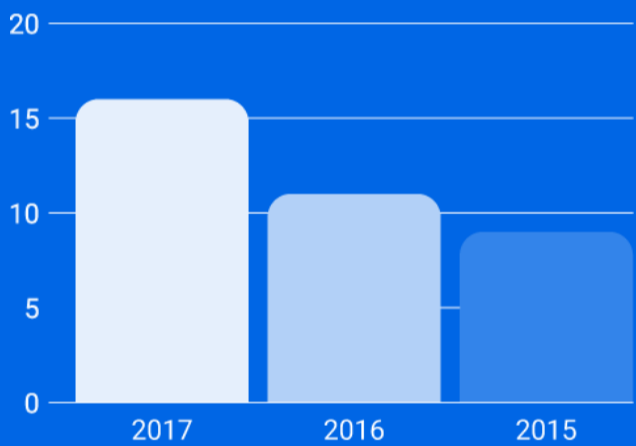

Does it provide valuable insights that can improve engagement?

## It should expand how you measure student success with:

- Diagnostic assessments
- Quizzes to assess lesson mastery
- Essay questions
- Standard annual tests
- Performance tasks
- Self and peer evaluations

This tool should allow you to track assessment scores, grades, learning pace and more in **real time**.

It should also provide a wealth of **actionable data** to inform key decisions and bring more transparency to your school.

## How can you successfully roll out a new personalized learning tool?

Shift the culture of learning and lead your community into the future by:

Sharing your vision with all of your stakeholders

Fostering collaboration across your school or district, from top to bottom

Providing the necessary implementation support, including teacher training

Developing an ongoing process to easily share analytics and apply lessons learned
